

AI VOICE AGENTS FOR ENTERPRISE

Your outbound, inbound, and CRM data. Acting as one.

Finn is the enterprise voice orchestration layer. It makes thousands of concurrent calls, reasons through each one, extracts the data, and updates your systems in real-time. No rework. No idle time.

Platform uptime

The swivel-chair tax

Every outbound team carries a hidden overhead that never shows up on an invoice: idle ring-time, manual CRM hygiene, and headcount that scales linearly with ambition. Your data doesn't act. People do — and you pay them to wait.

- 70% of a rep's shift is lost to ring-tone idle, voicemails, and manual CRM updates.
- Only ~1 in 8 dials connects, but you pay for all of them.
- Every 3× campaign becomes a 3× hiring problem.

What Finn does

- Fires thousands of parallel AI voice calls, reasoning through each conversation.
- Qualifies, books, and collects — then writes the result straight back to your CRM.
- Warm-transfers to a human the moment intent or sentiment calls for it — with full context.
- Sub-500ms voice loop (fused pipeline, not chained hops) — a real cadence, not a robot.
- Every call recorded, transcribed, and scored. SOC 2 Type II, HIPAA, GDPR, ISO 27001.
