

PLATFORM

The Finn platform, in one page

Voice intelligence, observability, orchestration, integration, and security — five pillars, one platform, built for teams that ship at production scale.

Five pillars

- AI agent capabilities — voice, chat, and multimodal agent tooling.
- Observability & evals — monitor, score, and improve every call against your rubric.
- Orchestration — route, escalate, and coordinate agents at scale (no-code).
- Integrations — CRMs, dialers, ticketing, calendars, and custom APIs.
- Security & trust — SOC 2 Type II, HIPAA, GDPR, ISO 27001, enterprise controls.

Under the hood

- Sub-second voice loop — streaming ASR + LLM + TTS in one fused pipeline, not chained hops.
- In-call function calling — pull from your CRM, fire webhooks, run logic mid-conversation.
- Multilingual by default — switch language mid-call; same agent, same persona, same context.
- Knowledge base + RAG — ground every answer in your docs; no hallucinated SLAs.
- Real-time speech — interrupt handling, silence detection, voicemail discrimination, built in.
- Post-call analysis — auto-tagged outcomes, sentiment, and cost-per-outcome per workflow.
