

COMPARISON

Finn vs. a raw voice API

Platform vs. toolkit: what you still have to build.

Why teams weigh it

A raw voice API is flexible and cheap per minute — and if you have the engineering to assemble everything around it, it's a fair path. The real cost lives in everything the API doesn't do.

The tradeoff

An API gives you a voice. You still own the prompts, the integrations, observability, evals, and the compliance surface — the 90% that turns a voice into a working agent. Finn ships that whole stack: pre-integrated with your CRM, pre-trained on your industry's objections, with orchestration, scoring, and SOC 2 Type II / HIPAA / GDPR / ISO 27001 built in. A toolkit gives you parts; Finn gives you outcomes.

Side by side

A raw voice API	Finn
A toolkit — you build the rest	A production platform — outcomes, not parts
You own prompts, integrations, and ops	Pre-integrated and pre-trained per industry
Observability and evals: bring your own	Built-in scoring, sentiment, cost-per-outcome
You own the compliance surface	SOC 2 Type II, HIPAA, GDPR, ISO 27001 built in
Weeks-to-months to production	Live in under 30 days

A voice API is a mouth. Finn is the brain, the integration, and the workflow.
