WHY FINN

Not a wrapper. The whole voice layer.

Most stacks chain providers in series and pay the latency tax at every hop. Finn runs one fused pipeline — voice intelligence, orchestration, observability, integration, and security — built for teams that ship at production scale.

<400ms	46	99.99%	50M+
End-to-end latency	Languages, live	Uptime	Minutes shipped

Four reasons teams pick Finn

- Fused pipeline. Streaming speech-to-text, inference, and text-to-speech in one hot pipeline — sub-400ms. Customers hear a real cadence, not stop-and-wait.
- No-code orchestration. Drag-and-drop call flows, conditional branching, human handoff, multi-agent coordination — orchestration that survives the messy real world.
- Built for regulated industries. Healthcare, finance, insurance, legal — from day one. SOC 2 Type II, HIPAA, GDPR, ISO 27001.
- Outcome observability. Recordings, transcripts, sentiment, and cost-per-outcome captured automatically. Spot drift, prove ROI, ship improvements in days not quarters.

One agent vs. a room of dialers

Human agent	Finn
35–60 dials/hour	10,000+ concurrent
8–15% connect rate	30–40% connect rate
15–20% talk time	90%+ talk time
Labour + overhead	Usage-based talk time
